(21) Application number: **04196819**(22) Date of filing: **23.07.1992**(71) Applicant: **MITSUBISHI KASEI CORP**(72) Inventor: **DEBITSUDO ARUBAGURI****(54) MONOMOLECULAR FILM OF OLIGONUCLEOTIDE****(57) Abstract:**

PURPOSE: To provide the monolecular film useful as functional materials such as DNA sensor, a material for molecular element, etc., by bonding a compound having an oligonucleotide structure through sulfur atom to the surface of a metal substrate.

CONSTITUTION: A compound having an oligonucleotide structure is bonded through sulfur atom to the surface of a metal substrate to give the monomolecular film formed on the surface of the metal substrate. The monomolecular film is preferably obtained by dis-

solving an oligonucleotide of the formula (R is H or a thiol-protecting group; R^1 is H or a 1-3C alkyl; E is a nucleic acid salt base; X is S or O; Y is H or OH; (m) is 1-20; (n) is 8 or more) in a solvent such as ethanol, adding an acid such as dichloroacetic acid to the solution, eliminating the protecting group of thiol, then taking out thiol and immersing a substrate having a heavy metal surface such as Au at 10-50 °C for one hour to 3 days.
